ALBANY, N.Y. — The ranks of women farmers in the Capital Region increased by 24 percent between 2012 and 2017, outpacing the state's growth rate (17 percent) for this demographic and on pace with that for the nation (27 percent).

Out of the state's 10 economic development regions, excluding New York City, the Capital Region now has the second highest concentration of women farmers, according to a Center for Economic Growth analysis of the U.S. Department of Agriculture's newly released 2017 Census of Agriculture.

With the agriculture and artisan food segment containing more than a quarter (28 percent) of the local creative economy's workers, women farmers are helping fuel this important economic driver that contributes to the Capital Region's vibrancy and attractiveness to talent.

As farms increasingly shift from traditional agricultural products to manufacturing more profitable products such as cheese and craft beer, they are also increasingly falling within the scope of services of CEG's Business Growth Solutions (BGS) unit, a National Institute of Standards and Technology (NIST) Manufacturing Extension Partnership (MEP).

## Producers

As of 2017, the eight-county region had 3,405 farms, and women farmers worked at 2,225, or 65 percent, of them. Regionwide there were 2,433 women farmers, or 40 percent of the 6,055 total farmers.

Only the Hudson Valley had a higher concentration at 42 percent. At 678, Washington County had the fourth greatest number of women farmers out of the state's 62 counties.

Diane Allen, the co-owner of Lavelair Farm in Whitehall said, "Farming lavender at Lavenlair Farm has been a labor of love these past six years, with equal measures of both 'labor' and 'love.'

"Much as with labor and delivery when having a baby, it is often painful and exhausting, but when I look out at our field of thousands of blooming lavender plants and our visitors enjoying their visit to the 'Provence' of upstate New York, it makes it all worthwhile. Being able to work side by side with my husband David, create local jobs and bring much-needed tourism revenue to Washington County makes me feel like our farm is an engine for local prosperity."

The USDA census, which is conducted every five years, refers to these farmers as "producers" (formerly "operators"). These are individuals who are "involved in making decisions for the farm operation."

The producers can be an owner, a member of the owner's household, a hired manager, a tenant, a renter, or a sharecropper. The decisions they make may relate to harvesting, livestock management, and marketing. Among the region's women farmers, 1,758 were classed as "principal producers," meaning they made the most decisions for, and/or spent the most time on, their farms.

Aliza Pickering, the farm manager of Pitney Meadows Community Farm in Saratoga Springs, said, "I am so grateful to have grown up with a handful of women role models that include my mother Heidi Pickering, a continuous mentor, Scout Proft of Someday Farm, and Lisa McDougal of Mighty Food Farm, whom I idolize.

"These women have paved the way for me to be in the position I am today, and it is motivating to hear there's a rising number of females in the field. Our food system is one of many aspects of our culture that is broken. I believe small scale organic farming could be a way to heal multiple areas at once.

"It's a catalyst for building community, health, and it is spirituality grounded in the living soil beneath us, reminding us that all is connected and sacred."

## Other Demographics

The 2017 Census of Agriculture also provides new interesting insights into the Capital Region's farming industry. For example, 37 percent of the region's farmers were below 55 years old. Twenty five percent of farmers were classed as new and beginning producers. Additionally, 8 percent of farmers had served or are serving in the military.

## CEG Activities

To support the growth of the Capital Region's agricultural economy, CEG is involved in the following activities:

Partnering with the Upstate Alliance for the Creative Economy to accelerate the growth of the creative economy, which includes creative manufacturers, such as cheese makers and breweries, as well as farm-to-table restaurants and the farms that supply them with locally grown produce and meat.

- Assisting farmers utilize renewable energy and improve their use of energy, water and materials.
- Providing technical assistance to local creative manufacturers, such as cheese makers and breweries, to help them operate more efficiently, tap new markets and grow in the region.

The Hudson Valley AgriBusiness Development Corp. can also assist Capital Region women farmers through the following programs:

- Incubator Without Walls Technical Assistance Program: Businesses admitted into this program can receive services such as comprehensive business planning, marketing and promotion, food safety certification/planning/permitting, land transfer and grant writing.
- Farm and Food Business Funding Accelerator: This intensive mentoring and training program helps farmers scale their business, gain access to capital and build sales.
- Hudson Valley Bounty: This program helps connect local agricultural producers and culinary businesses.
